## Key Facts

18
What makes Calderys a trusted partner across industries around the world is our people and their strong commitment to our customers and company.

Combining a global network with local expertise, we offer customised solutions wherever you are. We develop innovative products, services and installation techniques to best fit your equipment and processes.

What really sets us apart is our dedication to safety, at both your and our locations. No matter where we work, our teams and contractors follow a strict set of protocols developed to minimise the risk of accidents.
As part of Imerys, the world leader in industrial minerals, we benefit from a steady supply of critical raw materials. We also own a unique quartzite mine in Sweden which gives us complete process control for our silica-based product range. This allows us to be your reliable long-term partner.

With over 100 years of experience in refractories, we provide for all the major players in industries operating with extreme temperatures. We have built our technical expertise on the experience we have on the field, alongside our customers. We offer much more than products. We provide a complete range of services, from design to installation, as well as innovative installation techniques and equipment.
We repeat this a lot, but safety truly is the most important thing because you can’t turn back time and undo an accident. I believe safety and quality are like brothers. You need both to deliver great solutions. On an installation job, safety begins before the job, during the planning process and it continues during the entire installation process.
Our Commitment to Safety

Safety is Everyone’s Business

The nature of our business presents many challenges for safety, as we work both in our plants and on your sites. Over the years, we have created a very robust safety system that must be strictly followed in order to prevent injuries; not just to our employees, but to our contractors and customers.

Continuous Improvement

Since the creation of Calderys in 2005 we have made great improvements in our safety track record. We have achieved these impressive results by implementing a series of initiatives throughout our sites, originating from both Calderys and Imerys.

Communication is Key

Clear information and instruction is crucial, along with training, and follow up with close and effective supervision on the shop floor. We believe in leading by example and we have created various programs to instill a safety-oriented mindset in all our employees.
My primary role is managing daily production and technical functions of Calderys South Africa. Working for a global company is a great opportunity for me as I have exposure to professionals of different cultures and backgrounds, working on various projects. I can learn how other entities operate and improve the service we provide to customers.
Everywhere You Need Us to Be

Our plants are strategically located close to your operations to ensure flexibility and short lead time. Our experience in refractories allows us to create optimal procedures, which we share within our network of experts.

Global Projects with Local Input

We created a network in which all our project teams leverage best-practices and drive efficiencies. All local experts often work on international projects together, bringing their diverse technical background and experience to the table.
When I joined Calderys, I was truly surprised by how engaged our employees are. Although refractory might not look like a trendy industry, it is a surprising world which is providing solutions at the heart of our customers’ processes. We have great experts in raw materials and core customer processes; expertise which is not taught at school but nurtured through exposure and experience. Our technical expertise makes an impact and we continue to expand it with a strong focus on development on the job, through a global network and a great team work.
Our People, Our Asset

The diversity of our teams drives Calderys forward by combining unique skills and mindsets. We invest in our employees because we believe that they are essential in building long-lasting relationships with our customers and communities.

A World of Opportunities

We provide equal opportunities for all our people through tailor-made development paths, training, and challenging roles and projects. Thanks to our international network of plants and offices, our experts are exposed to multiple projects and refractory solutions: an invaluable knowledge that makes us a reliable partner.
Calderys is a multicultural and customer-centric company, working as a team to deliver the best results and value to the customer. We take care of our customers by delivering our projects and solutions in a safe and timely manner.

We are not simply providing products and manpower, we manage the entire process to reduce the downtime of the equipment without compromising on safety and quality. We offer each customer the know how of all the experience we have accumulated worldwide.
At Calderys, our customers’ needs are covered full-circle. Our innovative products and services guarantee ease and safety.

We offer a full range of refractory products and services to all industries working with extreme conditions and temperatures.

Check out our success stories to see how we can bring value to your business.
There’s nothing more powerful than cooperation. At Calderys, we see innovation as a way to add value to the activity of our customers but we wouldn’t be able to innovate without their involvement. We start with their needs and we use our 100+ years of experience in the field to build what can benefit them. We do this together, it’s teamwork!
Innovation That Brings Us Closer to You

We believe that innovation is the key to establishing long-term successful relationships with our customers. Our experience enables us to develop not only better products but also innovative services and installation techniques. Everytime we work on a project, our priority is to minimize operational downtime. That’s why we make sure our innovations increase refractory lining life.

Innovation Beyond Products

Innovation at Calderys does not stop at creating new product formulations. Our teams are equally dedicated to developing new installation methods and improving the safety and performance of installation equipment.

Your Health and Safety Comes First

Our business, by nature, encompasses many challenges for health and safety. We continuously work on environmentally sustainable and health-friendly solutions to reduce the risks for our employees and subcontractors. Recent examples include our resin-bonded tap-hole clays and our DVM pump for CIF Installation.
Sustainability of our communities across the world is an indispensable part of our growth story. CSR is not a particular program for us - it is what we do everyday to bring positive impact to our environment, like our recent education initiative called Educate to Empower. As part of this initiative, we dedicated a new building to the Katni school to allow for expansion and empowerment of the student body. The new building is equipped with 5 labs, 18 classrooms, a pantry, a staff room, an examination room and an open theater to serve more than 1100 students.
Our CSR strategy is central to our vision for the future. Supporting growth and long-term relationships with communities around the world, SustainAgility, the CSR program of Imerys group, focuses on three pillars:

**Empowering Our People**

Making sure employees stay healthy and safe, nurturing talent, promoting diversity, fostering social dialogue and safeguarding human rights

**Caring for the Planet**

Protecting the environment, promoting non-energetic resources efficiency, respecting biodiversity, and acting on climate change

**Building for the Future**

Behaving ethically, operating fairly, ensuring a responsible supply-chain, engaging with communities and promoting sustainable products and technologies
Key Facts

- 2300 Employees worldwide
- 33 countries in which we operate
